

Tsukuba International Breast Clinic

つくば国際ブレストクリニック

Thank you for trusting the Tsukuba International Breast Clinic (TIBC) with your important healthcare needs. As specialists in the field of breast care, we screen, diagnose, and treat the full spectrum of breast disorders and diseases using the latest technology and medical advances.

You may have recently been diagnosed with a disease or disorder and have questions about your condition. Be assured that our doctors and nursing staff will maintain constant vigilance about your condition and are available for any treatment needs that may arise. We may also refer you to networks of healthcare professionals that we collaborate with to provide the highest level of care.

Below are some English language resources from the American National Institutes of Health, the UK National Healthcare System and other professional and governmental agencies. These websites have comprehensive information about your condition, including symptoms, diagnostic criteria, treatment options, coping strategies and self-help tips. Your home country may have other resources in your native language. Please note that treatment options approved for Japanese clinics may differ but that the TIBC is dedicated to using the best options available in a plan customized to your specific need. Our doctors will answer any questions you may have about your specific plan.

You are not to blame for your disease or disorder. Serious conditions can affect women of all ages, classes, ethnicities, and backgrounds. The most important part of your treatment will be your dedication to your own healing and coping processes. We are here to support you with our treatment, care and understanding!
